

Modbus RTU to Modbus TCP Router

Integrate Modbus RTU with Modbus TCP devices with our Modbus Router. It is a compact Modbus device which provides smooth integration of Modbus RTU devices to Modbus TCP. The aim of this integration is to make accessible Modbus RTU devices, its registers and resources to a Modbus TCP client BMS or controller.

FEATURES

- UL certified
- Support for up to 5 simultaneous Modbus TCP Clients
- Support for up to 32 full-load RTU devices
- Modbus diagnose signals available in both MAPS and as Modbus registers
- Easy integration & updates with Intesis MAPS

Use case

Integration of Modbus RTU Devices into Modbus TCP example.

Description

This router provides a straightforward and fast integration thanks to its unique onboard features. Thanks to its support for both Modbus RTU and TCP, a seamless integration with any Modbus BMS or controller it is guaranteed. The configuration is carried out using the Intesis MAPS software. This one allows you to define your own settings for the device. Also, it will be able to download all the available project templates or to import any created/exported project template on your computer.
